

THE JOURNEY OF YLI-KARKELA CARROT FROM FIELD TO FORK

Cultivation

Tasty Yukon carrot is sowed in the spring and grown according to the Laaturaha guidelines. This guarantees a high quality product and an environmentally friendly process.

Harvesting

The carrots have reached their delicious taste in about 105 days and then it is time to harvest the crop. After harvesting, the carrots go straight to the cold storage to wait for orders.

Delivery

When the order arrives, only the ordered carrots are washed and packed. After that, they move to the departure storage to wait for the next morning's delivery.

Market

The farm owners deliver the fresh carrots themselves twice a week to the shops in the surrounding areas. You can recognize these juicy carrots by the bunny and the Sirkkalehti brand.

Table

You have now bought the "bunny" carrots, a good choice! This sweet carrot is good as such or, for example, when juiced. At best, the journey of a carrot from the packing line to the table is only one day.
